

Sub C1  
1. (Once Amended) A device for laying out a bowling ball, said device comprising:  
a semi-spherical base portion, having a center, for contacting a curved surface of a bowling ball, the perimeter of said base portion including degree indicators; and  
at least four curved arms for extending along the curved surface of a bowling ball, said arms including length measurement indicators, said arms connected with and extending from said base portion;  
wherein at least two of said arms are adapted to rotate about the center of said semi-spherical base portion.

Sub C2  
3. (Once Amended) The device in claim 1, wherein:  
at least one of said plurality of arms having a length sufficient to extend more than a quarter of the way down the circumference of the bowling ball.

Sub C3  
5. (Once Amended) The device in claim 1, wherein:  
an edge of each of said at least four arms is aligned with the center of said base portion.

Sub C4  
8. (Once Amended) A device for laying out a bowling ball, said device comprising:  
a semi-spherical base portion for contacting a curved surface of the bowling ball, said base portion defined by a solid perimeter portion including degree indicators, a substantially open middle portion, and a center portion, including a center aperture, joined with said perimeter portion; and  
at least four curved arms for extending along the curved surface of the bowling ball, said arms including length measurement indicators, said arms connected with and extending from said center portion of said semi-spherical base portion;  
wherein at least two of said angle indicator arms are adapted to rotate about said center aperture of said center portion.

Sub C5  
10. (Once Amended) The device in claim 8, wherein:  
at least one of said plurality of arms having a length sufficient to extend more than a quarter of the way down the circumference of the bowling ball.

Sub  
CG  
26

15. (Once Amended) A device for laying out a bowling ball, said device comprising:  
a semi-spherical base portion for contacting a curved surface of a bowling ball,  
the perimeter of said base portion including degree indicators and the center of said base portion  
including a aperture; and  
at least three curved arms for extending along the curved surface of a bowling  
ball, said arms including length measurement indicators, said arms connected with and extending  
from said semi-spherical base portion;  
wherein at least one of said arms is adapted to rotate about the center of said semi-  
spherical base portion.

Sub  
CG  
27

22. (Once Amended) A device for laying out a bowling ball having a spherical shape  
and a curved outer surface, said device comprising:  
a semi-spherical base portion adapted for contacting the curved surface of the  
bowling ball, said base portion defined by a center portion including degree indicators and  
including a center aperture; and  
at least four curved arms for extending along the curved surface of a bowling ball,  
said arms including length measurement indicators, said arms connected with and extending  
from said center portion of said semi-spherical base portion;  
wherein at least two of said arms are adapted to rotate about said center aperture  
of said center portion.

Sub  
CG  
28

44. (Once Amended) A device for laying out a bowling ball, said device comprising:  
a semi-spherical base portion, having a center , for contacting the curved outer  
surface of a bowling ball; and  
at least two curved arm for extending along the curved surface of the bowling  
ball, said at least two arms connected with and extending from the base portion;  
wherein a third arm is curved to extend along the curved surface of the bowling  
ball, and is adapted to rotate about the center of said base portion.
